

The Premier Domino Agent Health Monitoring and Reporting Application

TOP 10 Reasons Your Organization Needs Essential Agent Master

10. You don't have the time to check multiple places to figure out agent behavior
9. You need to identify agents that take forever to complete their task
8. You need to identify agents that run forever and don't complete their task
7. You need to identify agents that don't run at all
6. You have too many agents signed by ex-employees
5. You want to fix agents from the same screen where you learn they're not working
4. You need the flexibility to white list select agents and not have them report
3. You want to balance agent schedules for optimum infrastructure effectiveness
2. You want to be alerted when critical server agent exceptions occur and
1. You don't have the budget to upgrade hardware and then find out that **OUT-OF CONTROL AGENTS** are the major contributor to your organization's infrastructure slow down and not hardware issues.

Essential Agent Master is....

... a Domino application that:

- Uncovers *which* agents are not running to completion, *why* they are not running to completion and then makes it easy to fix them.
- Figures out *who* is successfully running agents in your environment, and who is *attempting* to run agents in your environment, unsuccessfully.
- Discovers *when* agents are running, and if particular time periods are over-scheduled enough to affect performance.
- Reveals *how often* agents are running, as most environments have agents that run too frequently
