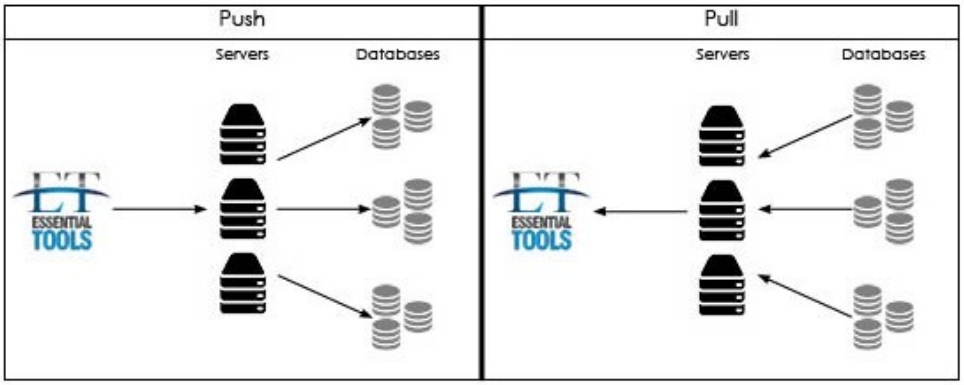
Essential Tools

So Many ACLs…So Many Regulations and Risk…So Little Time

Essential Tools (ET) is a robust, server-based, beacon award winning Domino administration tool designed to help Domino administrators perform their critical tasks more efficiently, and to or to fulfill automate certain tasks that are otherwise difficult or time consuming

ET collects Domino infrastructure information in a centralized location, and API-based server tasks execute enterprise-wide transactions at high speeds. This robust architecture ensures fast, efficient execution - all in the background. The transaction creation and execution is fully secured with well-defined rules and all transaction processing is fully logged for audit trail purposes.

ET will push updates such as ACL enforcers to your servers to be distributed to the correct database.



ET will pull critical information, such as unreferenced mail accounts from your environment.

An Administrative Tool that pays for itself

- **ACL Enforcement:** Create and enforce ACL requests in minutes rather than days.
- **Acquisition/Termination:** Add or remove mass amounts of user accounts to/from your Domino environment in a single day.
- **Database Design Management:** A single request can be generated for an enterprise regardless of the number of servers and the Essential Tools tasks are performed typically in less than a half hour.
- **Copy Entry:** Instantly assign any user identical access levels as another user in your environment.
- **Admin Process Assistance:** ET provides a report identifying Databases without a proper Administration Server setting before any issues can arise.

ET has several views...each with a context-sensitive action bar at the top offering quick access to view-related actions.

Database

- ✓ By Server
- ✓ By Replica ID
- ✓ By Properties
- ✓ By Design Template
- ✓ By Owner

ACL

- ✓ By File Path
- ✓ By Title
- ✓ By Entry/Access Level
- ✓ By Properties
- ✓ By Role

Requests

- ✓ By Status
- ✓ By Requester
- ✓ By Request ID
- ✓ By Request type
- ✓ User request by status

Configuration

- ✓ License Information
- ✓ Administrator Profiles
- ✓ Control Documents
- ✓ Requests for Profiles
- ✓ Attachments

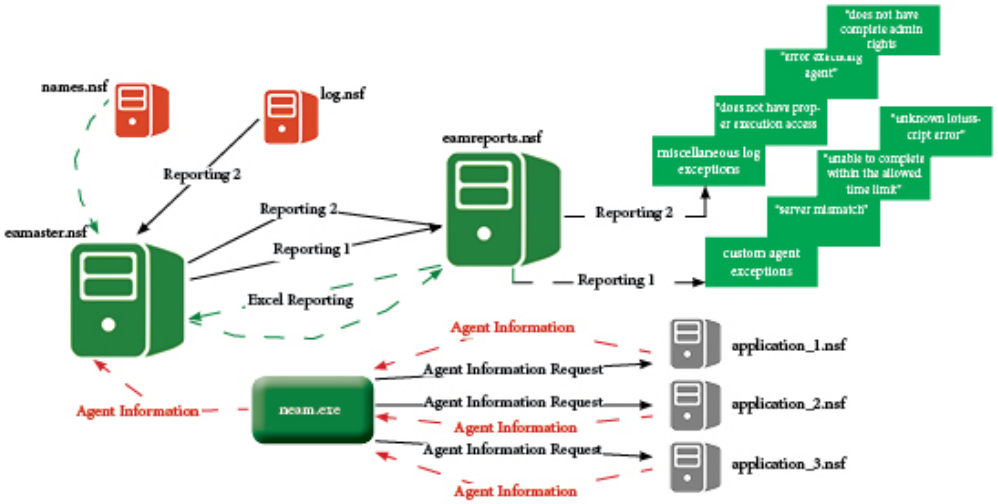
Essential Agent Master

RPR Wyatt



Managing the Backbone of Collaborative Workflow with Essential Agent Master(EAM)

Agents perform a vital function for Notes and Domino applications. As the backbone of collaborative workflow, agents interact with users, apply business rules and monitor specific events.

EAM is a Domino application that:

- ✓ Immediate notification of agent failures… with hourly monitoring of mission critical agent processes
- ✓ Uncovers which agents are not running to completion and why, and then makes it easy to fix them.
- ✓ Figures out who is successfully running agents in your environment, and who is attempting to run agents in your environment, unsuccessfully.
- ✓ Reports when agents are running, and whether particular time periods are over-scheduled enough to affect performance.
- ✓ Reveals how often and how long agents are running

Effective Workflow is a Must

By implementing Essential Agent Master, you can ensure:

- ✓ Critical business process workflows operates as designed
- ✓ Tight control of agents created by end users
- ✓ Quick identification of non-working or poorly designed agents
- ✓ Knowledge of agent schedules allowing adjustment for optimum server availability and performance
- ✓ Elimination of excessive replication and bandwidth consumption by out-of-control agents
- ✓ Ability to determine agents' role when servers slow to a crawl or crash
