

The Ultimate Developer Force Multiplier

Simply put, the Essential Framework (EF) enables administrators to take over and complete tasks that normally require a developer or development. By leveraging one document and one agent, administrators have the ability to pull data from any source and manipulate it into eye pleasing charts and graphs. Reports can be constructed through and iterative process in a web browser or in your preferred reporting mechanism, such as Microsoft Excel. With minimal intervention from developers, administrators can export data in universal formats (JSON, XML), set up scheduled exports to report on historical data, perform C.R.U.D. (Create, Read, Update, Delete) functionalities, and even start building their own applications.

Data

- Pull Data from Any Source
- Export in JSON or XML
- Work with Data **YOUR** Way
- Set up Data Profiles in Minutes

Reporting

- Leverage Your Current Mechanisms
- Securely Take Reports to the Web
- Reduce Reliance on Client Licenses
- Customizable Web Interface

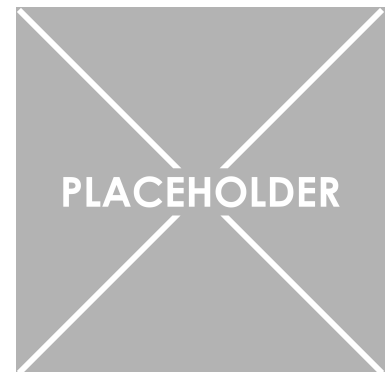

App Modernization

- Bring Application to the Web
- Extend the Life of Legacy Apps
- Build New Apps in Minutes
- Full C.R.U.D. Functionality

Benefits of Essential Framework

- Save money on client licenses
- You own the data, everything your way
- Save developer dollars
- Enable Admins
- Set up in minutes - Out-of-the-box
- Customizable Web interfaces
- Maintain Security with Roles
- Ensure Data Integrity with Input Validation
- Historical Data
- Scheduled Exports
