Exchange Monitoring with VitalSigns

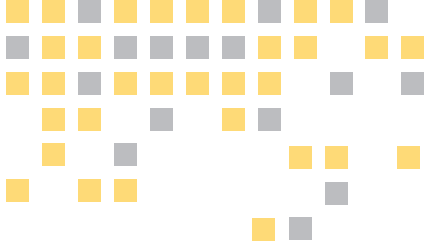

Microsoft Exchange environments are designed to enable organizations to foster collaboration and increase productivity through communication. However, to achieve these mission critical benefits administrators must assure that servers are always available and functioning properly.

VitalSigns for Exchange is built to prevent loss of productivity caused by system downtime and other inefficiencies, such as low disk space, backed-up queues or CPU issues, within the environment. This out-of-the-box monitoring and reporting tool allows you to manage every aspect of Exchange from an easy to view dashboard.

VitalSigns Exchange Monitoring Focus

- DAG Monitoring
- End-to-End Monitoring
- Folder Management
- CPU/Memory Usage
- Dozens of Reports & Alert Types
- Disk Space Management
- Monitoring of Queues & Connections
- Total Local Cached Mail File Size

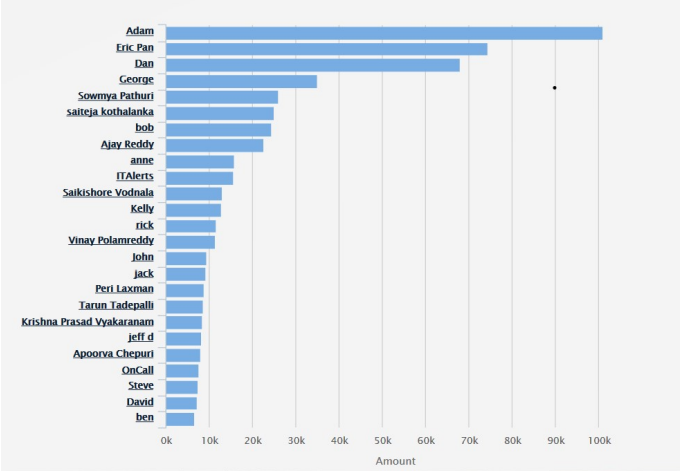

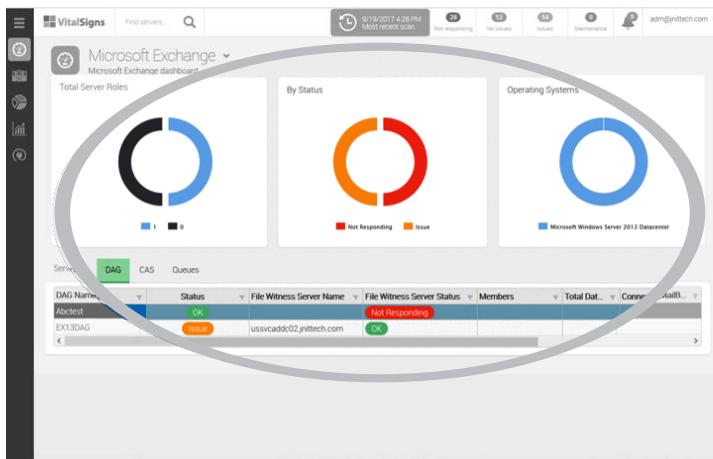

Outlook Mail Folder Statistics

- Drill down and identify each users' biggest mail folder
- Plan for mailbox database capacity with in-depth database usage reports
- Quickly diagnoses issues and pin-points the exact point(s) of failure
- Uses the DAG Health page to ensure all data is backed up if a failure occurs
- Automatically tests mail flow between multiple combinations of servers
- Improves user experience by simulating end user transactions using native mail protocols

Top 25 Biggest Single Folder (item count)

Identify which users have the largest folders in the organization. Each folder can then be expanded to offer in-depth statistics on an individual folder.

Monitor and manage server roles, server status and operating system from the Exchange Health page.

Exchange Server Health

VitalSigns is an end-to-end monitoring solution that is designed to improve the performance of Microsoft Exchange. Acting like an end user, VitalSigns creates, sends and then finally purges files to ensure Exchange is always functioning as it should.

Transactions are set to run pass/fail tests against critical components of the environment. VitalSigns proactively pushes out alerts when a test fails and of course you can always view your server health from the Exchange Health page.

Ready for IBM Collaboration

About Us

VitalSigns is the premier monitoring solution from RPR Wyatt, a USA based high-tech IT organization. For over eighteen years RPR Wyatt has created administration tools designed to enhance organizational collaboration, improve user experience, empower administrators, and lower operational IT costs. RPR Wyatt is a Microsoft and IBM Advanced Business Partner.
