Unleash the Power of Domino with the Essential Framework

For many years, Domino users have loved the platform for it's security and robust capabilities. The challenge is extending Domino's security and functionalities into an intuitive and mobile browser interface, allowing users to work more cohesively with modern organizational workflows.

The Essential Framework (EF) solution extends Domino, allowing developers to completely customize their Notes/Domino environments using standards-based development. With EF, you can rapidly create new web applications as well as bring existing applications to the web all while maintaining the existing, desirable Notes security model. By securely extending Domino beyond the Notes client, organizations can now significantly reduce their investment in client licenses.

ANALYZE

Construct your migration plan by analyzing your applications to identify which to migrate first, and the estimated overall complexity.

MODERNIZE

Use a low-code methodology to migrate existing Notes applications and workflows to the web while keeping your existing Notes security model intact.

CREATE

Rapidly create new web applications using EF's library of workflow patterns. Standardize Domino development and begin utilizing non-Domino developers.
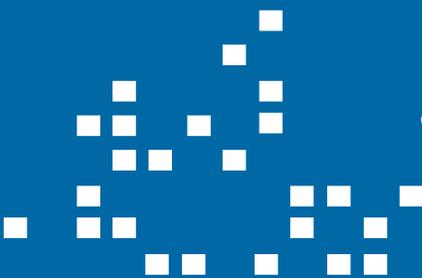

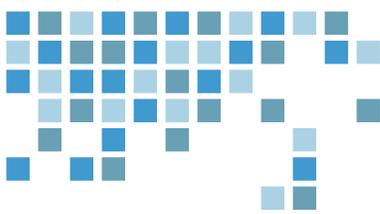

Benefits of The Essential Framework

For the Organization:

- Rapidly modernize Notes applications
- Keep existing Notes security model intact
- Eliminate the need for client licenses
- Deliver an intuitive user-experience
- Enable productivity anytime, anywhere
- Foster organizational collaboration
- Leverage non-Domino and junior developers

For the Developers:

- Work with what you know and love
- Unleash the power of the Domino platform
- Start with applications 90% complete
- Leverage & enhance existing workflows
- Integrate with standard-based technologies
- Delegate tasks to junior developers
- Build with an iterative design process

The Essential Framework Process

1 — Data

- Get any data from any Notes database in XML or JSON without development
- Create sustainable, reusable and restful services allowing consumption of data
- Integrate Notes data into modern mixed development environments

2 — Security

- Leverage and extend your existing Notes security model
- Allow each of your applications to have their own security requirements
- Directory, database and form level security function as normal

3 — Reporting

- Zero restraints or restrictions - use YOUR data, YOUR way
- Integrate Notes data into industry best of breed solutions such as Excel, Oracle, SQL
- Pursue an iterative reporting process using built-in Excel and browser templates

4 — Application Modernization

- Complete Control. Choose which components to use then further customize each one
- Concentrate on your solution at hand and let EF handle the underlying framework
- Rapidly snap together applications to reduce development time by up to 90%

About Us

RPR Wyatt, a Microsoft and IBM Advanced Business Partner, is known for "The Essential Team for IT," an award-winning portfolio of applications and services designed for Domino administrators. For over eighteen years RPR Wyatt has created administration tools designed to enhance organizational collaboration, improve user experience, empower administrators, and lower operational IT costs. Essential Framework, our latest offering joins VitalSigns, Essential Tools, Essential Agent Master, Hoozin and Spam Sentinel.
