

# SECURELY MODERNIZE POWERSHELL WITH VITALSIGNS

Who We Work For

## Senior Management

Highlight areas where value can be added or where ROI can be increased

## Administrators

Identify trends, delegate tasks and reallocate resources to boost efficiency

## End Users

Empower users to run their own scripts while maintaining complete control and security

## Security Managers

View Audit Trails and manage who has access to what with AD role-base

## HOW WE WORK

A decade ago, Microsoft themselves, stated that the single most important skill for an administrator is proficiency with **PowerShell**. In 2019, that is still true. However, not every organization has a team full of scripting experts readily available. **PowerScripts** securely automate **PowerShell** into on-demand commands.

**PowerScripts** enable administrators to securely delegate scripting tasks to IT personnel that have little to no **PowerShell** experience. VitalSigns' **PowerScripts** leverage Active Directory role-based authentication and encryption to safely assign credentials to designated users. Packed with an on-demand library of **PowerScripts** VitalSigns also incorporates enterprise features into **PowerShell** like audit logs, error handling and event-based triggers.

# MODERNIZE POWERSHELL SHELL

TO MAXIMIZE AVAILABLE RESOURCES

Run PowerShell commands securely anytime, anywhere to effectively manage Microsoft Office 365, Exchange, SharePoint, Skype, Teams and OneDrive.

## On-Demand Library

Access a continuously growing library of PowerShell commands that can be run with the click of a button. Enable junior administrators to execute scripts while maintaining complete control.

## Audit Trail

Automatically generate a log entry each time a user attempts to run or runs a PowerShell script. Each log entry contains the script, the date, the individual who ran it - as well as the result.

WHAT'S  
INSIDE

## AD Authentication

Leverage the security of Active Directory to streamline the delegation process. Encrypted credentials are stored, never shared, and access is reliant on a user's role within AD.

## Easy Configurator

Easily add new PowerShell scripts to the growing library, manage user access settings, edit roles and assign rights all from the VitalSigns Configurator.

## WHY

# POWERSCRIPTS?

**PowerScripts** function as a force multiplier for organizations by freeing up the time of highly skilled system administrators, while at the same time enabling junior administrators to take on new roles. Scripting experts can now focus on the big picture like designing new powerful, automating **PowerScripts** and delegating day-to-day script execution to other individuals.

**PowerScripts** offer a convenient and secure way for organizations to completely streamline the management and execution of **PowerShell**. Use VitalSigns' **PowerScripts** to take **PowerShell** to new heights for both productivity and security.
